PROJECT

- **Placement Management System**

  Placement Management System is built using Java Swing Library, it is a fast-flexible file computer system that helps manage the information related to college student placement database effectively. They manage the data related to all student academic details concerned with campus placements for the campus placement drive which is conducted annually.

- **Billing Management System**

  A Java-based application developed using Java Swing and MySQL, designed to streamline billing processes with features like customer management, product catalog, and invoice generation. It offers an intuitive user interface and robust data handling capabilities.

- **Personal Portfolio**

  A responsive, interactive website built using HTML, CSS, and JavaScript to showcase personal projects, skills, and contact information. Ideal for developers, designers, or freelancers seeking to establish an online presence.

- **Age Calculator**

  A web application built with HTML, CSS, and JavaScript that calculates a user's age based on their date of birth. It provides an interactive and user-friendly interface for quick age determination.
